the *right* choice

www.pestmaster.com

Termites have been on earth since the beginning of time and are specially adapted for defense.

Termites continuously forage for food. Literally thousands of termites work non-stop 24-hours a day, 7 days a week eating wood.

Termites can gain entrance into your home through a crack in the foundation as small 1/32 of an inch. That is smaller than a human hair.

Termites use mud shelter tubes to move above ground and termites must have moisture to survive. When wood is placed on the ground it acts like a wick.

100%*

TERMITE CONTROL.

PERIOD.
